

HYDRUS

The Ultrasonic Water Meter that meets any challenge

With its ultrasonic measuring principle and integrated communication, HYDRUS is the ideal metering solution for smart metering systems. HYDRUS enables trouble-free data readout, long-term economical operation and supports the efficient use of water resources.

Saudi Arabia is extremely interested in technologically sophisticated solutions that are ecologically and economically sustainable – especially when the vital resource water is concerned.

DIEHL Metering has implemented the largest full-coverage network in the MENA Region in Dammam using HYDRUS. A 30 square kilometer area, utilising more than 20,000 HYDRUS water meters providing their reading data wirelessly to permanently installed GPRS receivers.

DIEHL Metering is proud to have played an active part in this exciting project emanating from Dammam.
